the authors' knowledge, this is the first study to examine the effects of a single session of a group-based, self-help, cognitive-behavioral intervention on the self-reported health status of people with chronic low back pain. The authors' findings suggest that a single session of a group-based, self-help, cognitive-behavioral intervention can improve the self-reported health status of people with chronic low back pain. The authors' findings also suggest that a single session of a group-based, self-help, cognitive-behavioral intervention can improve the self-reported health status of people with chronic low back pain. The authors' findings also suggest that a single session of a group-based, self-help, cognitive-behavioral intervention can improve the self-reported health status of people with chronic low back pain.

▶ *Chlorophyll fluorescence* is a measure of the efficiency of photosynthesis. It is the ratio of the fluorescence yield to the incident light intensity. It is a useful indicator of the health of a plant and can be used to monitor the effects of stress on photosynthesis.
